Summary

Self-taught software engineer, **coding since the age of 16**, designing, developing, and deploying scalable, high-performance enterprise applications. Demonstrated expertise across modern Web and App ecosystems—Angular, TypeScript, JavaScript, Material UI, and PrimeNG—complemented by robust backend proficiency in Node.js, Go, and .NET. Adept at managing complex data systems with PostgreSQL, MariaDB, MongoDB, Neo4j, and Elasticsearch, and skilled in rapid development using WordPress and no-code platforms. Proven ability to lead cross-functional teams and deliver end-to-end solutions that elevate architecture, enhance user experience, and drive measurable innovation. Passionate about leveraging cutting-edge technologies to solve complex problems, optimize performance, and create intelligent, future-ready digital products.

Experience

Vision Tech 360

April 2023 – Present

Full Stack Web Developer

Islamabad, Pakistan

- Architected and optimized enterprise-grade web applications using Angular, enhancing system performance, responsiveness, and user experience by 30%.
- Directed full-stack development initiatives leveraging Node.js, Go, and .NET, delivering highly scalable, fault-tolerant, and secure solutions.
- Designed and deployed automated dynamic reporting frameworks with JSReport, streamlining operations and reducing manual reporting effort by 50% while improving data integrity and accuracy.
- Partnered with cross-functional teams across design, QA, and DevOps to drive timely, high-impact project delivery aligned with business objectives.

Institute of Cardiology

Dec 2024 – Present

Open Source Intelligence (OSINT) System

London, United Kingdom

- Designed and engineered a scalable open-source intelligence (OSINT) platform for automated data collection, processing, and analysis.
- Built a microservices-based backend using Go (Golang) and gRPC for high-performance inter-service communication.
- Developed an Angular frontend with seamless Python-based orchestration services, enabling efficient data workflows and analytics.
- Implemented modular architecture and robust data pipelines to enhance system reliability, maintainability, and scalability.

Freelance

Aug 2024 – Jan 2025

Enterprise Task Management System

California, USA

- Spearheaded end-to-end development of a modular task management system enhancing task delegation, tracking, and accountability across teams.
- Architected and implemented Role-Based Access Control (RBAC) with integrated KPI tracking to monitor individual and team performance.
- Developed interactive analytics dashboards using Chart.js and automated watermarked report generation for secure data distribution.
- Engineered real-time updates via WebSockets and strengthened platform security with JWT-based authentication and two-factor verification.
- Optimized front-end performance and scalability through Angular modularization and RxJS-driven state management, deployed seamlessly via Nginx.

Independent Contractor

Dec 2022 – Feb 2024

Modern News Aggregator Website

San Francisco, United States

- Developed a fully responsive, dynamic news aggregator using Angular and Bootstrap, integrating seamless cross-device functionality.
- Implemented automated web scraping from 100+ global news sources, enabling real-time categorized content delivery.
- Designed and prototyped UI in Figma, translating to a user-centric interface with drag-and-drop layout editing and multi-theme customization for enhanced engagement.

Technical Skills

Frontend:

Angular, JavaScript (Vanilla, TypeScript), Material UI, PrimeNG, HTML5, CSS3, SASS, Tailwind CSS, Bootstrap, Responsive Web Design, RxJS, State Management, Wordpress, React, React Native

Backend:

Node.js, Go, .NET, RESTful APIs, Microservices, Serverless Architecture, Django

Databases:

PostgreSQL, MariaDB, Neo4j, Elasticsearch, MongoDB, SQL, NoSQL

Tools:

JSReport, Git, CI/CD Pipelines, Docker, Kubernetes, Agile Methodologies (Scrum, Kanban), Confluence, Jira
